# Contents

**Preface** **vii**

**1. Basic terms of inference and graphical modelling in computer vision** **1**
1.1 Input, output, and principled information in vision inferences 2
1.2 The ground-truth pole of vision modelling 8

**2. Input information and graphical structures** **15**
2.1 Pixel lattices 16
2.2 Over-segmented images 21
2.3 Other kinds of input data 26
2.4 The graphical code of input information 28

**3. Output information and dependence relations** **31**
3.1 Output variables and their ranges 31
3.2 Locations of output variables 34
3.3 Links between output variables 40
3.4 Dependences involving output variables 41

**4. Markov random fields and their potentials** **47**
4.1 Individual potentials 48
4.2 Networks of potentials 52
4.3 Energy function and Gibbs distribution 56
4.4 Separations and independences in a Markov random field 60
4.5 Why probabilities? 65
4.6 Generative and conditional Markov random fields 66

**5. Bayesian networks and their conditionals** **71**
5.1 Individual conditionals 72
5.2 Networks of conditionals 75
5.3 Global distribution of a Bayesian network 79
5.4 Separations and independences in a Bayesian network 81
5.5 Types of Bayesian networks 86

**6. Designing and fitting models** **93**
6.1 The design of Markov random fields 94
6.2 The design of Bayesian networks 100
6.3 Estimating the parameters of a model 106

**7. Inferences guided by models** **111**
7.1 Probabilistic inference in computer vision 111
7.2 The graph-cut algorithm for Markov random fields 116
7.3 The message passing algorithm for Bayesian networks 125

**8. Four examples** **135**
8.1 An MRF model for inferring a depth map from a single static image (Hua & Tian, 2016) 136
8.2 An MRF model for inferring illuminance and reflectance from luminance (Murray, 2020) 141

8.3 A BN model for inferring segmentations of images (Feng, Williams, & Felderhof, 2002) 148
8.4 A BN model for inferring expressions of human faces (de Campos, Tong, & Ji, 2008) 154
